Re: Station KFLY(FM), Corvallis, Oregon
One-Step Upgrade Modification Application

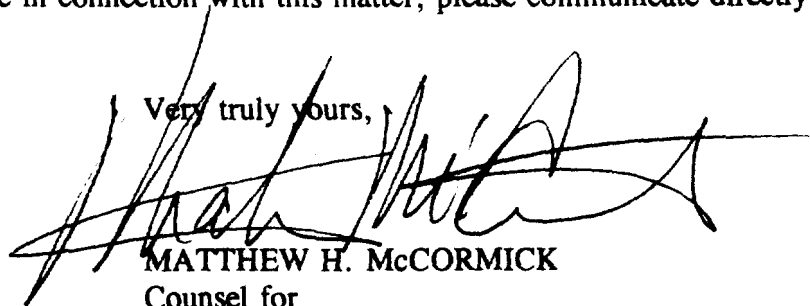

Dear Mr. Caton:

Transmitted herewith in triplicate on behalf of Madgekal Broadcasting, Inc., licensee of Station KFLY(FM), Corvallis, Oregon, is an application for modification of the facilities of Station KFLY(FM). Station KFLY presently operates on Channel 268C2. Through this application, a one-step upgrade to Channel 268C is sought.

Also transmitted herewith is a check in the amount of \$650 in payment of the requisite processing fee.

Should any questions arise in connection with this matter, please communicate directly with this office.

Very truly yours,

MATTHEW H. McCORMICK

-Polarization

10. Is a directional antenna proposed?

☐ Yes ☒ No

If Yes, attach as an Exhibit a statement with all data specified in 47 C.F.R. Section 73.316, including plot(s) and tabulations of the relative field.

Exhibit No.
--

11. Will the proposed facility satisfy the requirements of 47 C.F.R. Sections 73.315(a) and (b)?

☒ Yes ☐ No

If No, attach as an Exhibit a request for waiver and justification therefor, including amounts and percentages of population and area that will not receive 3.16 mV/m service.

Exhibit No.
--

12. Will the main studio be within the protected 3.16 mV/m field strength contour of this proposal?

☒ Yes ☐ No

If No, attach as an Exhibit justification pursuant to 47 C.F.R. Section 73.1125.

Exhibit No.
--

13. (a) Does the proposed facility satisfy the requirements of 47 C.F.R. Section 73.207?

☒ Yes ☐ No

(b) If the answer to (a) is No, does 47 C.F.R. Section 73.213 apply?

☐ Yes ☐ No

(c) If the answer to (b) is Yes, attach as an Exhibit a justification, including a summary of previous waivers.

Exhibit No.
--

(d) If the answer to (a) is No and the answer to (b) is No, attach as an Exhibit a statement describing the short spacing(s) and how it or they arose.

Exhibit No.
--

(e) If authorization pursuant to 47 C.F.R. Section 73.215 is requested, attach as an Exhibit a complete engineering study to establish the lack of prohibited overlap of contours involving affected stations. The engineering study must include the following:

Exhibit No.
--

- (1) Protected and interfering contours, in all directions (360), for the proposed operation.
- (2) Protected and interfering contours, over pertinent arcs, of all short-spaced assignments, applications and allotments, including a plot showing each transmitter location, with identifying call letters or file numbers, and indication of whether facility is operating or proposed. For vacant allotments, use the reference coordinates as the transmitter location.
- (3) When necessary to show more detail, an additional allocation study utilizing a map with a larger scale to clearly show prohibited overlap will not occur.
- (4) A scale of kilometers and properly labeled longitude and latitude lines, shown across the entire exhibit(s). Sufficient lines should be shown so that the location of the sites may be verified.
- (5) The official title(s) of the map(s) used in the exhibit(s).

14. Are there: (a) within 60 meters of the proposed antenna, any proposed or authorized FM or TV transmitters, or any nonbroadcast (except citizens band or amateur) radio stations; or (b) within the blanketing contour, any established commercial or government receiving stations, cable head-end facilities, or populated areas; or (c) within ten (10) kilometers of the proposed antenna, any proposed or authorized FM or TV transmitters which may produce receiver-induced intermodulation interference?

☒ Yes ☐ No

If Yes, attach as an Exhibit a description of any expected, undesired effects of operations and remedial steps to be pursued if necessary, and a statement accepting full responsibility for the elimination of any objectionable interference (including that caused by receiver-induced or other types of modulation) to facilities in existence or authorized or to radio receivers in use prior to grant of this application. (See 47 C.F.R. Sections 73.315(b), 73.316(e) and 73.318.)

Exhibit No.
E-2

15. Attach as an Exhibit a 75 minute series U.S. Geological Survey topographic quadrangle map that shows clearly, legibly, and accurately, the location of the proposed transmitting antenna. This map must comply with the requirements set forth in Instruction V (D). The map must further clearly and legibly display the original printed contour lines and data as well as latitude and longitude markings, and must bear a scale of distance in kilometers.

Exhibit No.
E-3

16. Attach as an Exhibit *(name the source)* a map which shows clearly, legibly, and accurately, and with the original printed latitude and longitude markings and a scale of distance in kilometers:

Exhibit No.
E-4

(a) the proposed transmitter location, and the radials along which profile graphs have been prepared;

(b) the 3.16 mV/m and 1 mV/m predicted contours; and

(c) the legal boundaries of the principal community to be served.

17. Specify area in square kilometers (1 sq. mi. = 259 sq. km.) and population (latest census) within the predicted 1 mV/m contour.

Area 17 894 sq. km. Population 778 791

18. For an application involving an auxiliary facility only, attach as an Exhibit a map *(Sectional Aeronautical Chart or equivalent)* that shows clearly, legibly, and accurately, and with latitude and longitude markings and a scale of distance in kilometers:

Exhibit No.
- -

(a) the proposed auxiliary 1 mV/m contour, and

(b) the 1 mV/m contour of the licensed main facility for which the applied-for facility will be auxiliary. Also specify the file number of the license.

19. Terrain and coverage data *(to be calculated in accordance with 47 C.F.R. Section 73.313)*

Source of terrain data: *(check only one box below)*

FCC NOTICE TO INDIVIDUALS REQUIRED BY THE PRIVACY ACT
AND THE PAPERWORK REDUCTION ACT

The solicitation of personal information requested in this application is authorized by the Communications Act of 1934, as amended. The Commission will use the information provided in this form to determine whether grant of the application is in the public interest. In reaching that determination, or for law enforcement purposes, it may become necessary to refer personal information contained in this form to another government agency. In addition, all information provided in this form will be available for public inspection. If information requested on the form is not provided, processing of the application may be delayed or the application may be returned without action pursuant to the Commission's rules. Your response is required to obtain the requested authority.

Public reporting burden for this collection of information is estimated to vary from 72 hours 40 minutes to 347 hours 25 minutes with an average of 218 hours 32 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing the burden, can be sent to the Federal Communications Commission, Information Resources Branch, Room 416, Paperwork Reduction Project, Washington, D.C. 20554, and to the Office of Management and Budget, Paperwork Reduction Project (3060-0027), Washington, D.C. 20503.

THE FOREGOING NOTICE IS REQUIRED BY THE PRIVACY ACT OF 1974, P.L. 93-579, DECEMBER 31, 1974, 5 U.S.C. 552a(e)(3), AND THE PAPERWORK REDUCTION ACT OF 1980, P.L. 96-511, DECEMBER 11, 1980, 44 U.S.C. 3507.

EXHIBIT E**ENGINEERING STATEMENT**

for

MADGEKAL BROADCASTING, INC.

concerning

**APPLICATION FOR A CONSTRUCTION PERMIT TO
MAKE MINOR CHANGES TO RADIO STATION
KFLY FM, CORVALLIS, OREGON**

FCC File No. BLH-5870**INTRODUCTION**

This statement and attached exhibits have been prepared for Madgekal Broadcasting, Inc., licensee of Radio Station KFLY FM located in Corvallis, Oregon, relative to application for a FCC construction permit to change Class to 268C, change antenna location, HAAT and ERP. These minor changes are permitted by MM Docket No. 92-159 as a one-step process.

The Applicant is the licensee of FM radio station KFLY in Corvallis, Oregon now operating on channel 268C2. It is proposed to move the KFLY transmitter and antenna location to an existing tower site on Vineyard Mountain where a new guyed tower structure will be erected by Oregon Public Broadcasting. The KFLY FM antenna will be side mounted on this new tower which will be within 15 meters of the existing tower supporting the KOAC-TV channel 7 antenna.

Operation will be on channel 268C. The antenna height above average terrain will be increased from 30 to 335 meters and the effective radiated power will be increased from 28.0 kW H to 100.0 kW H&V to comply with CFR 47 Section 73.210(b)(3)(iv) for a Class C station. The transmitter will be remote controlled from the KFLY studio location in Corvallis.

FCC Form 301, Section V-B

Exhibit E-1 is a vertical plan sketch of the proposed ten section circularly polarized FM antenna that will be side mounted on a new guyed steel tower structure with an overall height of 61.6 meters above ground. The FM antenna

will employ one-half wavelength spacing to minimize the downward radio frequency energy radiating from this antenna.

The area surrounding the antenna site is not populated and no adverse effect is expected by blanketing interference. Exhibit E-2 is a statement by the Applicant accepting full responsibility for elimination of any objectionable interference to existing communications services if such should occur from the proposed operation.

Exhibit E-3A, a full scale portion of the Airlie South 7.5 minute Geological Survey map, shows the proposed transmitter and antenna location. Exhibit E-3B is the reduced photographic copy of the entire Airlie South 7.5 minute topographic map.

Exhibit E-4 is a U.S. Geodetic Survey map with county boundaries which shows the predicted 3.16 mV/m (70 dBu) and 1.0 mV/m (60 dBu) coverage contours and the principal community, Corvallis, Oregon located on the N173E degree radial from the proposed antenna site. The average height of terrain for each of 72 radials from the proposed site were obtained from the linearly interpolated 30 second National Geophysical Data Center database. Terrain and Coverage data is tabulated in Exhibit E-5. The distance along these radials to the predicted 3.16 mV/m, 70 dBu, and 1.0 mV/m, 60 dBu contours were determined from reference to propagation data published by the FCC in Figure 1 of Section 73.333 of the Rules. All areas within the community of Corvallis are line-of-sight from the proposed FM antenna location.

Census facts for the population of the area enclosed by the 60 dBu contour were taken from the Official Population Estimates for Oregon Counties and Cities, dated July 1, 1994, published by the Center for Population Research and Census, School of Urban and Public Affairs, Portland State University. The population of the area within the 60 dBu contour was obtained by plotting this contour on a map shown in Exhibit E-4. Where the contour cut a county division, the proportion within was measured with a polar planimeter, assuming uniform population distribution after deducting incorporated towns and cities. These towns and cities deducted, but within the contour, were then added back to the count. The area within the 60 dBu contour was also measured with the polar planimeter.

Exhibit E-6A is an environmental statement evaluating compliance with FCC specified guidelines for human exposure to radio frequency radiation. Exhibit E-6B is a plot of the vertical relative field for the proposed ten section FM antenna with one-half wavelength spacing.

FAA Form 7460-1 has been completed and submitted to that agency in Renton, Washington.

Respectfully submitted,

Robert A. McClanathan, P.E.

EXHIBIT E-2

STATEMENT CONCERNING RADIO FREQUENCY INTERFERENCE

The proposed ten section FM antenna will be side mounted on a new guyed steel tower with an overall height above ground of 61.6 meters. This tower site is located with 15 meters of the existing KOAC-TV channel 7 tower. The existing channel 7 TV antenna is vertically above the proposed KFLY FM antenna. The proposed site is 0.7 kilometers Southwest of an established antenna site on Vineyard Mountain where other FM broadcast and communications facilities are located.

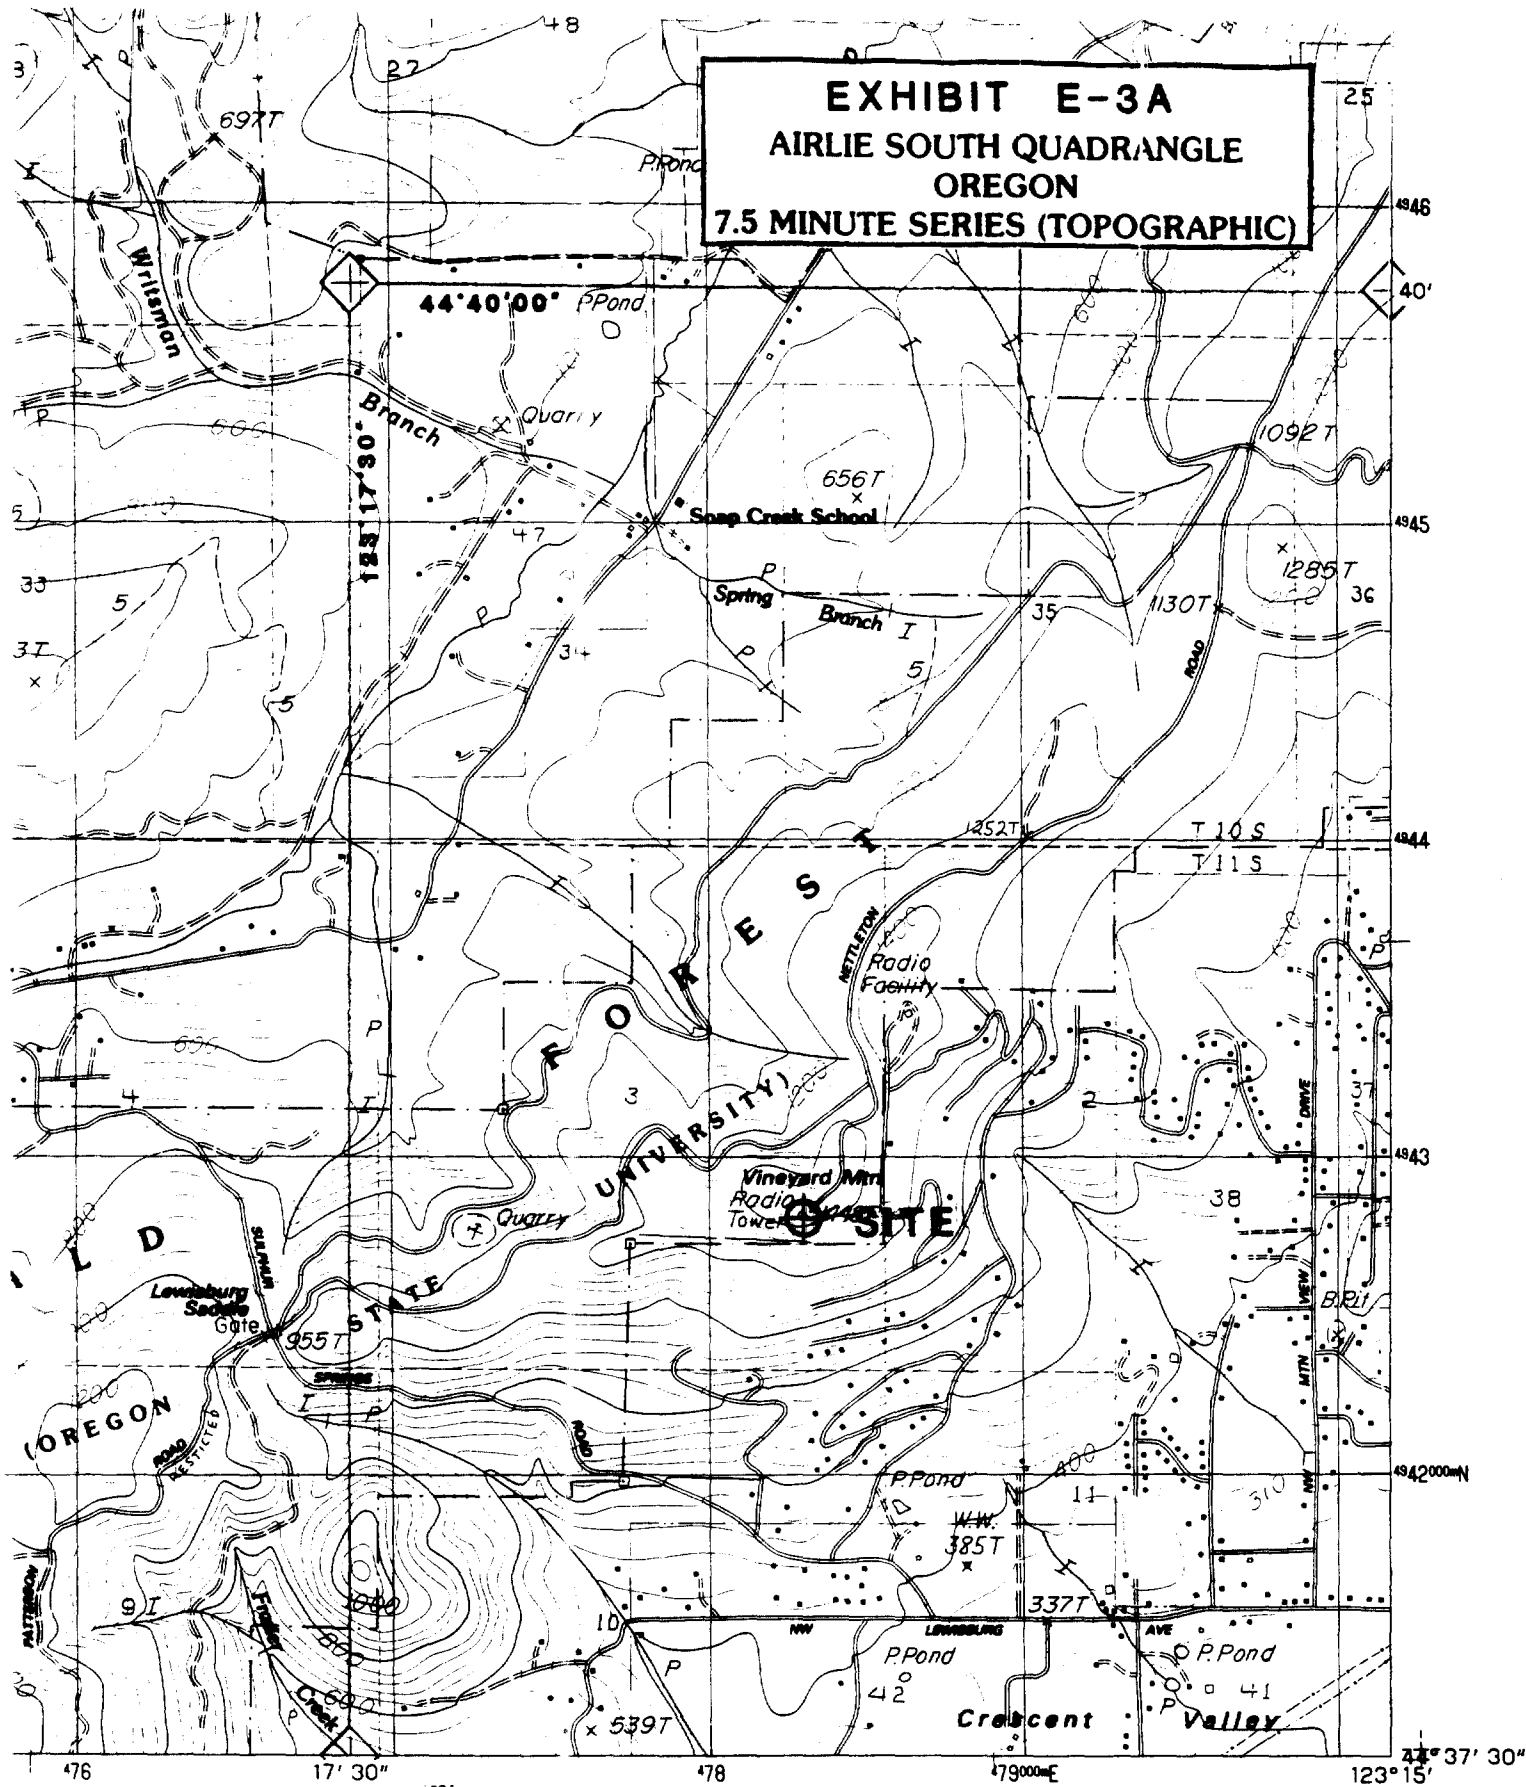

The proposed operation by the Applicant is on 101.5 MHz with an ERP of 100.0 kW employing circular polarization. The height of the antenna supporting structure was selected so that the center of radiation of the proposed ten section FM antenna will be above any future lower power communications antennas located in the vicinity.

While it is unlikely that transmitter intermodulation products will be produced as a result of the transmitters for KRKT 99.9 MHz, KFAT 106.1 MHz and KHPE 107.9 MHz located 0.7 kilometers away, the Applicant will take care to look for any spurious radiations during the equipment test period when making measurements to show compliance with 47 C.F.R. 73.317 and 73.1590. Particular care will be taken to investigate for any I.M. products on 110.7 and 114.3 MHz in the aeronautical band.

There is a slight possibility that the second harmonic of KFLY, combined with the fundamental of KHPE, $2f(101.5) - f(107.9) = 95.1$ MHz, could result in an intermodulation product on the carrier frequency of KSND located in Lincoln City 62.6 km from Vineyard Mountain. However, Vineyard Mountain is not within the primary coverage contour of KSND. If any such spurious radiations occur that are not in compliance with 73.317(d), the Applicant will install appropriate bandpass filters on the effected transmitter to correct this condition.

It is not expected that there will be any occurrence of Receiver Induced Third Order Intermodulation Effect (RITOIE) as a result of the proposed KFLY operation and the nearby FM stations. It is believed that there will be no adverse effect on existing communications facilities located in the vicinity. In the unpredictable event that intermodulation or other interference should occur as a result of the proposed operation, the Applicant, by signing the certification on Page 2 of Section VII, FCC Form 301, accepts responsibility to immediately take action to correct such adverse conditions by means of standard types of cavity filters and traps.

ENVIRONMENTAL STATEMENT

An Environmental Assessment (EA) is categorically excluded under 47 C.F.R. Section 1.1306(b) of the FCC Rules and Regulations since the Applicant's proposal does not:

1. Involve a site location specified under 47 C.F.R. Section 1.1307(a)(1) through (7).

2. Involve high intensity lighting under 47 C.F.R. Section 1.1307(a)(8).

3. Result in human exposure to radiofrequency radiation in excess of the applicable safety standards specified in 47 C.F.R. Section 1.1307(b), (ANSI C95.1-1982 and ANSI C95.1-1991).

The Maximum Permissible Exposure (MPE) for uncontrolled environments at 101.5 MHz is 0.2 mW/cm^2 . The distance D from the proposed FM antenna radiating a total of 200.0 kW (100.0 H and 100.0 V) ERP to the MPE point may be determined by the equation on page 9 of the FCC OST Bulletin No. 65 dated October 1985. The relative field strength at depression angles towards the ground for the one-half wavelength vertical spaced ten element antenna is less than 0.10 as shown on the attached vertical plane relative field plot Exhibit E-6B. The MPE distance from this antenna for uncontrolled exposure is:

$$D^2 = \frac{(2.56)(1.64)(0.10)^2(200,000 \text{ watts})(1000 \text{ mW/W})}{4(3.1416)(0.2 \text{ mW/cm}^2)}$$

$$D = 1827 \text{ cm} = 18.3 \text{ meters}$$

The center of radiation for the proposed FM antenna is 51.8 meters above ground level and the lowest radiating element is 45.1 meters above ground level. Therefore, the proposed installation does comply with ANSI and FCC specified guidelines for uncontrolled human exposure to radio frequency radiation. The tower structure will be fenced to prevent unauthorized access.

The purpose of installing an antenna with one-half wavelength element spacing is to reduce the vertically radiated field to nearly zero to insure compliance with ANSI and FCC guidelines for protection of human exposure to radio frequency radiation and also to minimize potential for interference to other communications services in the vicinity and below the antenna.
